3 March 2021

Rotorua Regional Airport Limited PO Box 7221 Te Ngae Rotorua 3042

Attention: Mr Mark Gibb

Dear Mark

2020 ACTUAL NOISE CONTOURS AND 2021 ANNUAL AIRCRAFT NOISE CONTOURS

Introduction

Marshall Day Acoustics (MDA) has been engaged to prepare projected and actual noise contours based on movements that occurred in the 2020 financial year (1 July 2019 - 30 June 2020) as per rule A7.2.1(d)(iii) and A7.4.1 of the Rotorua District Plan (District Plan).

The 'Actual Noise Contours' (ANC) uses aircraft movements during the busiest three months of the 2020 financial year as these contours represent the actual noise emissions from aircraft operations in FY20 ('2020 ANC'). The purpose of these contours is to assess compliance with the noise boundaries in the District Plan.

The projected contours are termed the 'Annual Aircraft Noise Contours' (AANC) and use the busiest three months of the 2020 financial year, with the projected growth over the next year added to produce the '2021 AANC'. The purpose of these contours is to identify which properties are eligible for acoustic treatment offers under the Noise Mitigation Programme detailed in the District Plan (Appendix A7.4).

Noise Rules

The noise rules that apply to the airport are contained in Appendix 7 of the District Plan.

Rule 7.2.1(d) sets a 65 dB L_{dn} noise limit on airport operations outside the Air Noise Area.

Rule 7.2.1(d)(iii) requires the Airport Operator to provide a report detailing the calculated noise levels at the boundary of the Air Noise Area on an annual basis. The noise contours calculated for this rule are based on the actual aircraft activity over the previous twelve months and the purpose of the contours is to assess compliance with the Airport's noise limits.

Rule A7.4.1 requires the preparation of an AANC plan indicating which properties are predicted to lie within the 60 and 65 dB L_{dn} contours at a date twelve months from the date of preparation. The contours are based on the busiest three months of the preceding year with the projected growth over the next year added for the purpose of offering acoustic treatment to eligible dwellings.

Noise Model Input and Assumptions

The 2020 ANC and 2021 AANC have been prepared using the Integrated Noise Model (INM) version 6.1 which is the same software used to produce the airport noise boundaries in the District Plan.

Aircraft movement data for FY20 was provided by the Airport Company. The busiest three consecutive months were December 2019, January and February 2020 and the aircraft movements from these three months were used to calculate the 2020 ANC.

To calculate the 2021 AANC, projected growth for the next 12months has been applied to the data used to calculate the 2020 ANC. The growth estimate is provided by the Airport Company.

The aircraft movement data only includes details of aircraft arrivals to the airport, so it has been assumed that for every arrival a corresponding departure took place.

Runway usage has been estimated based on typical wind patterns resulting in 60% of movements on Runway 18 (on a southerly heading) and 40% on Runway 36 (on a northerly heading). Helicopter movements have also been included in the model and use different flight tracks to fixed wing aircraft.

Calculated 2020 ANC

Figure 1 shows the calculated 65 dB L_{dn} noise contour for the 2020 ANC compared with the District Plan Air Noise Area. This figure shows that the 2020 65 dB L_{dn} contour lies comfortably within the Air Noise Area and therefore aircraft noise complied with the limit.

Calculated 2021 AANC

Figure 2 shows the predicted 2021 AANC 60 and 65 dB L_{dn} contours compared with the largest contours from previous years which are the 2019 AANC.

The 2021 AANC are generally smaller than the 2019 AANC. The modelled taxi and helicopter flight tracks have been refined at the south end and near the terminal hence the 2021 AANC contours are thinner in these areas.

The purpose of the AANC is to identify whether any new houses are eligible for an offer for acoustic treatment under the 2021 AANC. A digital copy of the 2021 AANC will be provided to Rotorua District Council to identify which properties are eligible that have not previously received an offer.

Yours faithfully
